PRESENTATION

As a final year student of the doble degree in Computer Engineering and Business Administration and Management, I define myself as an efficient and responsible person, endowed with a great capacity for sacrifice to achieve the objectives set. My interests lie in data analysis and its application in risk decision making in business areas such as Venture Capital and Private Equity. As well as the crucial role that artificial intelligence plays in the future evolution of society.

My approach to work is characterised by being thorough, decisive and organised. I strive for a thorough understanding of the objectives set, contrasting information and evaluating different perspectives before making decisions. I am a committed and responsive collaborator, who is at ease in a collaborative environment. I stand out for my diligence and interest in financial mechanisms, carrying out different personal investment projects, as well as actively searching for new opportunities.

My professional goals are based on two clear points, gaining practical experience in the financial and administrative field, thus contributing to my personal and professional growth. In addition to constantly seeking opportunities to provide an excellent service to the company and to overcome the challenges presented to me.

To conclude, some of the most enriching experiences I have had are independent stays in Bern (Switzerland) and Cambridge (England), during which I have improved my language skills, teamwork and acquired financial, administrative and management skills. These experiences have strengthened my adaptability and broadened my perspective both academically and personally.
